

Livestock Tracking & Processing System — Updated PRD (V1)

1. Product Overview

Yeh ek **web-based system** hai jo Saylani jaise organization mein bakron (livestock) ko:

👉 arrival → branch allocation → slaughter → processing → inventory

end-to-end track karega

2. System ka Main Purpose

- bakron ka proper record rakhna
 - kaunse branch par kitne gaye → track karna
 - kitne zabah hue → track karna
 - gosht, khal, paye ka exact hisaab rakhna
 - final reporting dena
-

3. Real Problem

Abhi kya hota hai:

- entry manual hoti hai
- slaughter ka exact count missing hota hai
- gosht ka weight accurate nahi hota
- khal aur paye ka record loose hota hai

👉 system in sab ko fix karega

4. Users

Admin

- sab control karega

Branch Manager

- apni branch ka data manage karega

Staff

- daily data entry karega
-

5. COMPLETE APPLICATION FLOW (MOST IMPORTANT)

Step 1: Bakra Entry (System Start)

Admin ya manager system mein entry karega:

👉 Batch create hoga

Example:

- Batch #001
- Total: 100 bakray
- Category: Medium

👉 Yeh ek group entry hai (individual tracking nahi)

Step 2: Branch Allocation

Admin decide karega:

👉 kaunse branch par kitne bakray jayenge

Example:

- Branch A → 40
 - Branch B → 60
-

Step 3: Branch Receive

Branch manager confirm karega:

👉 “mujhe 40 bakray mil gaye”

👉 status: **RECEIVED**

Step 4: Slaughter Start (REAL TRACKING STARTS)

Jab zabah start hota hai:

👉 staff system mein entry karega:

- date
- kitne bakray zabah hue

Example:

👉 aaj 10 zabah hue

IMPORTANT LOGIC

👉 system automatically:

- remaining bakray kam karega
 - slaughter count update karega
-

Step 5: Processing Entry

Har slaughter ke baad:

👉 staff enter karega:

- gosht (kg)
 - khal (count)
 - paye (count)
-

Example:

10 bakray →

- 180kg gosht
 - 10 khal
 - 40 paye
-

Step 6: Inventory Update

System automatically:

- 👉 gosht stock mein add
 - 👉 khal stock mein add
 - 👉 paye stock mein add
-

Step 7: Reporting

Admin dekh sakta hai:

- total bakray
 - total slaughter
 - remaining
 - total gosht
 - total khal
-

6. Core Modules

6.1 Livestock Entry Module

Purpose:

Bakray system mein add karna

Fields:

- batchId
 - totalAnimals
 - category
 - arrivalDate
-

6.2 Branch Allocation Module

Purpose:

Bakron ko distribute karna

Fields:

- batchId
 - branchId
 - assignedAnimals
-

6.3 Slaughter Module

Purpose:

Daily zabah track karna

Fields:

- branchId
 - date
 - slaughterCount
-

6.4 Processing Module

Purpose:

Output record karna

Fields:

- branchId
 - slaughterId
 - meatWeight (kg)
 - skins (count)
 - paye (count)
-

6.5 Inventory Module

Purpose:

Stock maintain karna

Fields:

- branchId
 - meatStock
 - skinStock
 - payeStock
-

6.6 Reporting Module

Purpose:

Data analyze karna

7. Business Rules (IMPORTANT)

- slaughter count > available animals →  not allowed
 - processing entry tabhi hogi jab slaughter ho
 - negative values →  not allowed
 - branch sirf apna data manage karegi
 - admin sab dekh sakta hai
-

8. SYSTEM LOGIC (VERY IMPORTANT)

Bakra Count Logic

Total Animals = 100

Slaughter Today = 10

Remaining = 90

Inventory Logic

Meat += entered weight

Skin += count

Paye += count

Data Flow

Batch → Branch → Slaughter → Processing → Inventory → Report

9. SIMPLE DATABASE SCHEMA (DEV READY)

Users

```
User {  
  _id  
  name  
  role (admin | manager | staff)  
  branchId  
  status  
}
```

Livestock Batch

```
Batch {  
  _id  
  totalAnimals  
  category  
  arrivalDate  
}
```

Branch Allocation

```
BranchAllocation {  
  _id  
  batchId  
  branchId  
  assignedAnimals  
  receivedAnimals  
}
```

Slaughter

```
Slaughter {  
  _id  
  branchId  
}
```

```
date
count
}
```

Processing

```
Processing {
  _id
  branchId
  slaughterId
  meatWeight
  skins
  paye
}
```

Inventory

```
Inventory {
  _id
  branchId
  meatStock
  skinStock
  payeStock
}
```

10. UI Screens

Admin:

- Dashboard
 - Batch Create
 - Branch Allocation
 - Reports
-

Manager:

- Receive Livestock
 - Slaughter Entry
 - Processing Entry
-

Staff:

- Quick Entry Screen
-

11. Platform

👉 Responsive Web App

12. MVP Scope

MUST:

- batch entry
 - branch allocation
 - slaughter tracking
 - processing
 - inventory
 - reporting
-

NOT NOW:

- barcode tracking
 - AI
 - mobile app
-

13. Final Product Definition

“A system that tracks livestock from arrival to slaughter and records all outputs to maintain accurate inventory and reporting.”
